

Tools & Methods for Small Holder Farmers to understand and act on soil health & crop nutrient requirement

M. Karthikeyan & S. N. Anilkumar

Tools & methods for smallholder farmers to understand and act on soil health & crop nutrient requirements is the copyright material of the **Nature-Positive Farming & Wholesome Foods Foundation (N+3F)**. The **N+3F** is a non-profit organisation with a mandate to catalyse scaling up nature-positive farming and wholesome food systems (N+FFS) across India to meet the fundamental human right to healthy foods, while operating within planetary boundaries. Its specific objectives are:

- a. **To support farming communities, farmers organizations (FOs), NGOs, and other agencies** to evolve, establish, and scale-up context-based N+FFS, leading to elimination of the use of synthetic chemical pesticides.
- b. **To facilitate the development of regional/territorial and national value/supply chains** for safe, pesticide-free wholesome foods.
- c. **To build a knowledge base, serve as a resource organization, and create an enabling environment** for nature-positive farming and wholesome food systems.
- d. **To promote equality and social inclusion in N+FFS** by engaging with vulnerable sections like small farmers, Dalits, tribals, women, youth, and consumers with low purchasing power.
